Application No. 06074066 , Filed 19940317 , Published 19941220

Abstract:

PURPOSE: To obtain a resin compsn. excellent in moldability, permanent antistatic properties, and mechanical strengths by compounding a polyetheresteramide with a specific vinyl polymer, a specific block copolymer, and a specific copolymer.

CONSTITUTION: This resin compsn. comprises 40-1 pts.wt. polyetheresteramide, 0-40 pts.wt. vinyl polymer having sulfonic acid (salt) groups, 0-40 pts.wt. block copolymer having polyolefin blocks and arom. vinyl polymer blocks, and 50-95 pts. wt. (co)polymer having at least one kind of structural unit selected from the group consisting of units derived from styrene, methyl methacrylate, acrylonitrile, and butadiene provided that the amts. of the vinyl polymer and the (co) polymer are not simultaneously 0.
